Hi John & Stephen,

Linked here is the finalised [Development Plan](#) for the Bullet Digital Media Onboarding Process Automation.

Please let me know if there are any further changes required.

One final question from our side is regarding the manual follow-ups that are sent during the onboarding. This was mentioned in Stephen's Loom videos;

Our proposal is to replace it in Sprint 3 with a single client-assets table in our DB, a live checklist per client in the dashboard, and one email template with conditional blocks. That kills the branching workflow, surfaces what's outstanding to Sam at a glance, and removes Stephen's manual chase pattern. We've scoped it into Sprint 3 in v3 but want to sanity-check that's not over-reach given everything else we're fitting into Phase 1?

Look forward to hearing from you.

Cheers
Chris

Hi Chris - thanks for this mate...

Dev Plan - looks incredible... in terms of changes required, the only potential bump i see is the following...

Currently, **after the kick off call** the process is as follows...

- Performance Director (who leads the kick off call) will...
- Come up with some offer name options (based on the client / brand / whats working currently / historically for similar clients / offers
- If it's a checkout page (lower ticket offer), they will work out the "total value" and £/\$ savings based on the following...

- **Most relative membership rate to anchor from**

- i.e if its £200 a month for unlimited classes (say a crossfit membership) and we are running a 21 day offer we'd run £200/30.4 x 21 to get the daily rate.
- or if we are doing a pilates studio and running a 5 class pack - we may anchor to their drop in rate, say £30 per class. If the offer is 5 for £59 we'd run £30x5 to calculate total value then derive % off and £ savings.

- **Offer Addition 1 - Consultation Value** - If theres a consultation as part of the offer (agreed on kick off call) we would add the value of that on to the total value.
- **Offer Addition 2 - Body Scans** - Client may have 1, 2 oe 3 body scans as part of their offer. We get the value of a single body scan in the OB survey and then would add this into the total value calculation prior to determining £ savings / % off.

- Performance director would then put them into to the Onboarding Survey Google Doc at the bottom and let the Account Manager know its ready to be sent / for them to finalise...

- They then take the relevant email template (bottom of OB doc) and slap in the info in Gmail to send to the client.

*****The main point here - is currently, there's a pause for human intervention between kick off call and sending that email, as not absolutely everything is agreed or 100% locked in on the kick off call.*****

So what I am looking to understand is ultimately...

**- Is this currently considered in the scope and the goal from your side is to get AI to do all of the above?
- or, do we need to put a human intervention point in between the KOC and that email getting sent to the client?**

Your Final Question - 1 Email with coditional blocks sounds great.

API access and credentials...

[Have started compiling API Keys on this Sheet here.](#)

-> let me know if this is on the right lines here as each platform has different options.

-> If there is more info on what you need from each platform somewhere please link me back to it.

-> Stripe - theres some considerations and a lot of read / write options - more detail in sheet linked above.

Thanks all
